

LCEC CONTRACTS Texas Metering and Devices for Meter Site Testing and Inspections

Lovington, NM— May 20, 2024—Lea County Electric Cooperative, Inc. (LCEC) has contracted with Texas Metering and Devices (TMD) to perform our meter site testing and inspection program. The purpose of the program is to evaluate meter quality, condition, and accuracy. Inspections have begun and will continue for the next two years. Inspections will take place all throughout LCEC’s service territory.

LCEC wants its members to be informed about the procedures during the metering inspections. Inspection crews, utilizing pickups, may be observed on or near members' properties. TMD inspectors will be identifiable by clearly marked vehicles featuring the TMD logo. They will also be accompanied by an LCEC employee. Occasionally, they may need to request access to meters located behind fences or gates from property owners.

The meter inspection process is brief and serves to confirm the safety and accuracy of meters on members' properties for both the public and LCEC employees. If you have any questions, please call LCEC at 575-396-3631.

Established in May 1949, Lea County Electric Cooperative, Inc. is a member-owned cooperative headquartered in Lovington, New Mexico, with branch offices in Tatum, New Mexico, and Plains, Texas.
